

Assignment 2-Case Study

Stage 3 Tutorial Activities

From Requirements to Domain Models

Week 6 | 60 minutes

Candidate Concepts

Candidate	Class?	Reason
Patient	Candidate	Manages patient information
Practitioner	Candidate	System concept as it manages practitioner information
Appointment	Candidate	Is a system concept. Manages bookings, status and history
Name	No	Attribute used for patient/practitioner information
Clinic	No	Not a separate class
Database	No	Not a domain class. A storage detail
Cancellation	No	Part of appointment behaviour
Status	No	Attribute of appointment

CRC Cards

Patient

Responsibilities	Collaborators
Add patient information	Appointment
Find patient information	

Practitioner

Responsibilities	Collaborators
Add practitioner information	
Manage practitioner information	Appointment

Appointment

Responsibilities	Collaborators
Create, update and cancel	Patient
Store date and time and status and keep appointment history	Practitioner

Relationship Reasoning

Patient to Appointment: which relationship and why?

One patient can have none or many appointments. 1 to 0

Practitioner to Appointment: what multiplicity?

Practitioner can have none or many appointments. Each appointment is assigned to one practitioner. 1 to 0

Should Appointment inherit from Patient?

No as it is a different concept. It is linked to a patient not a type of patient

Does Clinic need to own every object?

No it is not stated or confirmed.

AI Model Critique

Critique AI proposals:

PatientManager - Rejected

PractitionerManager - Rejected

AppointmentManager – Modified – Appointment management is required but to keep it simple it can be placed in Appointment rather than adding another class

ClinicController - Rejected

NotificationManager - Rejected

ScheduleEngine - Rejected
